Two overlooked host fish species of *Margaritifera auricularia*  
(*Bivalvia, Unionoidea, Margaritiferidae*)

Rafael ARAUJO

Museo Nacional de Ciencias Naturales, José Gutiérrez Abascal 2, E-28006 Madrid, Spain

Key words: Bivalvia, Unionoidea, Margaritiferidae, *Margaritifera auricularia*, ecology, host fish.

Nienhuis (2003) recently published an article on French populations of *Pseudunio auricularius* (Spengler, 1793) (= *Margaritifera auricularia*). He apparently overlooked that *Salaria fluviatilis* Asso, 1801, the river blenny, and *Acipenser baeri* Brandt, 1869, the Siberian sturgeon, were already identified by Araujo, Bragado & Ramos (2001) as additional host species for the glochidia of *M. auricularia*, next to the Atlantic sturgeon, *Acipenser sturio* L., 1758.

More recently it has been proved that the Adriatic sturgeon (*Acipenser naccarii* Bonaparte, 1836), is yet another suitable host for successful metamorphosis of the glochidium of *M. auricularia* (Araujo, Quirós & Ramos, 2003).
